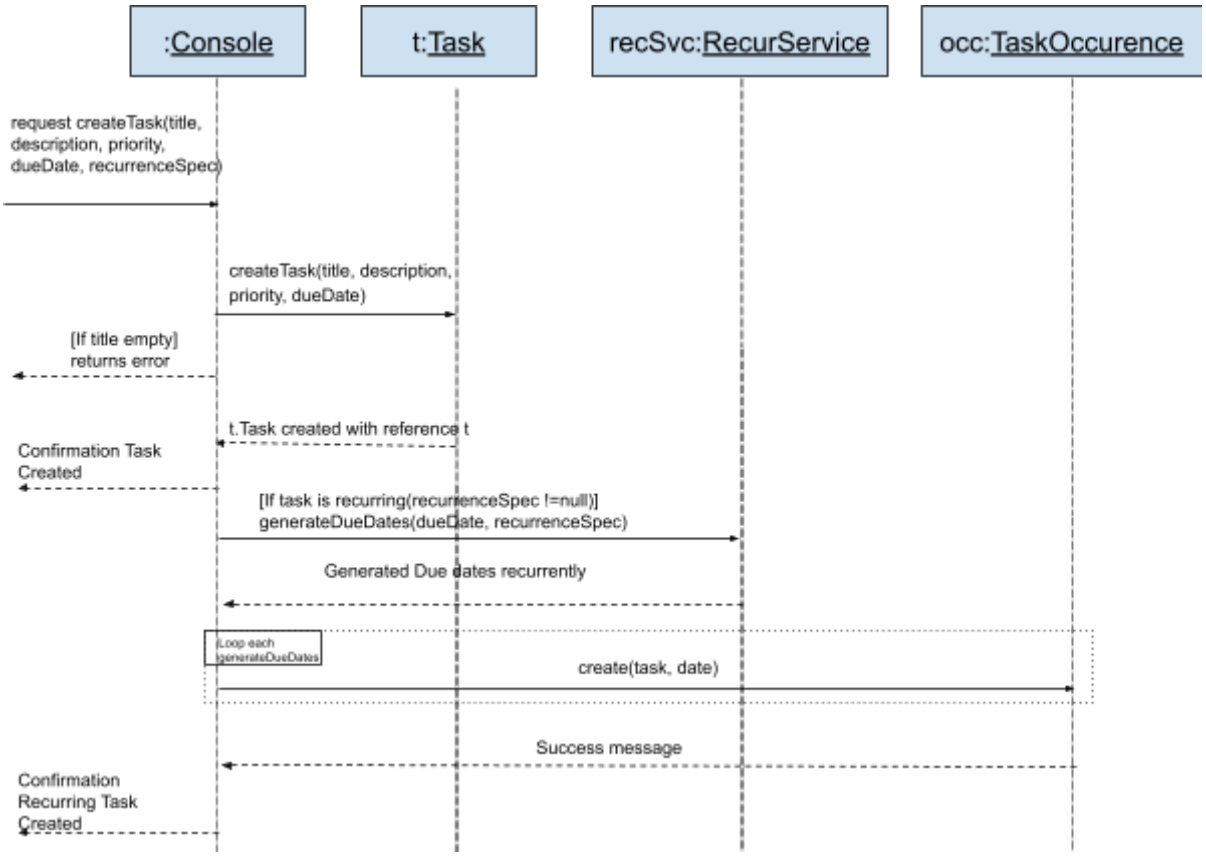
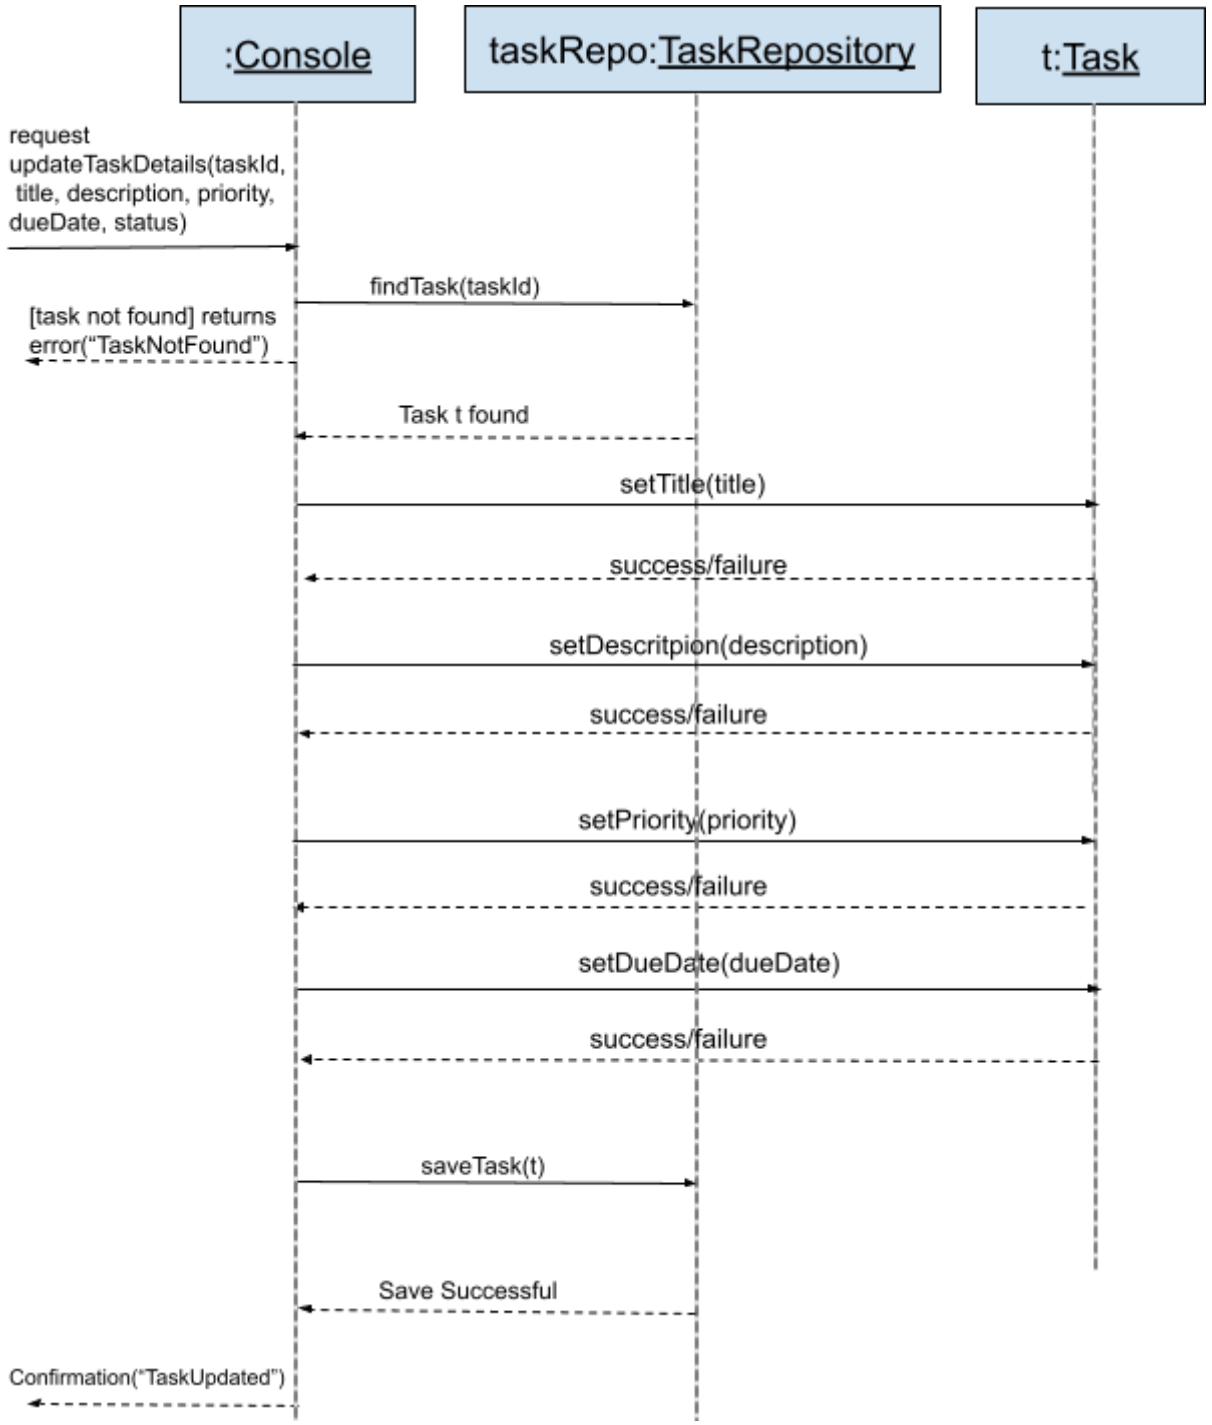
# UML interaction diagrams for critical use-cases

Interaction Sequence Diagram based:

**1. Create a task**



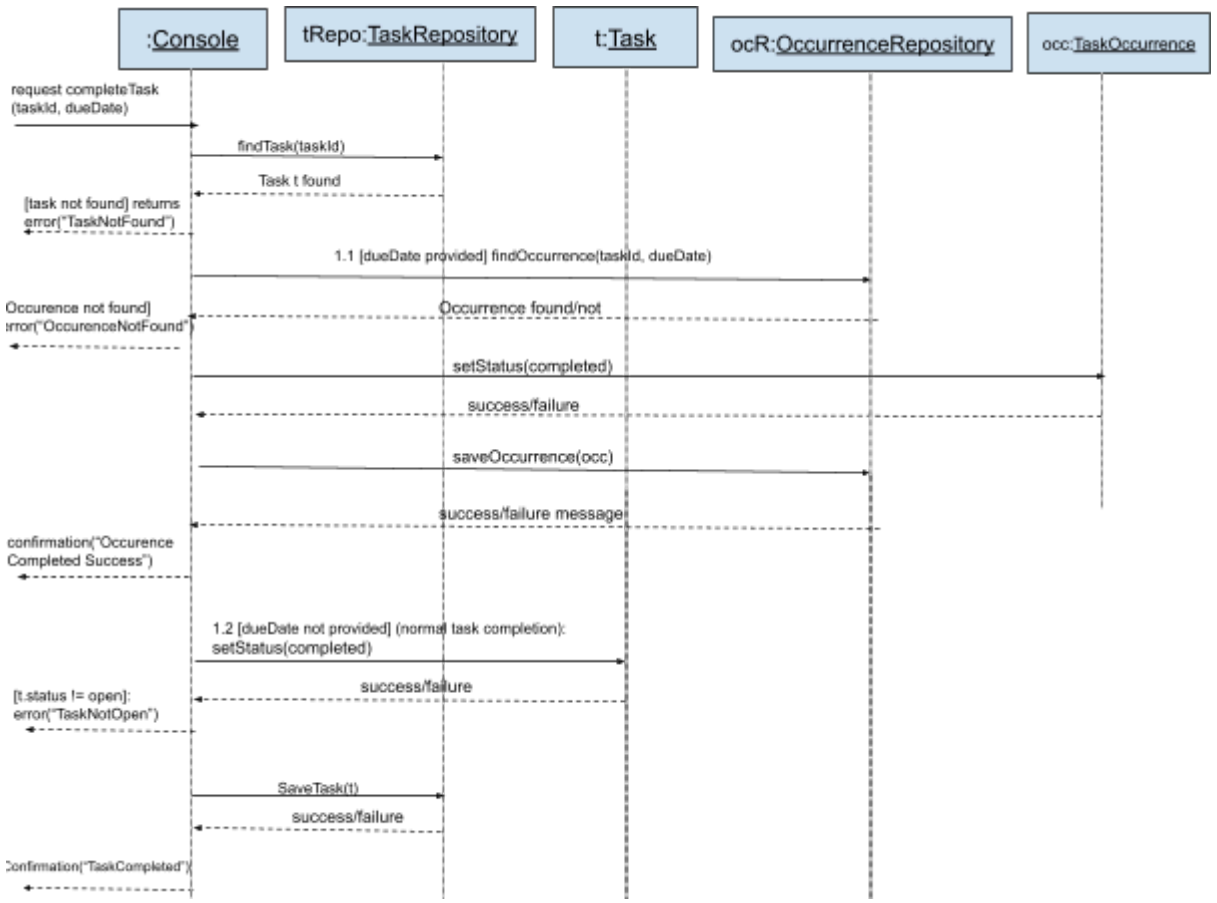
**2. Updating Tasks Details using: updateTaskDetails(taskId, title, description, priority, dueDate, status)**



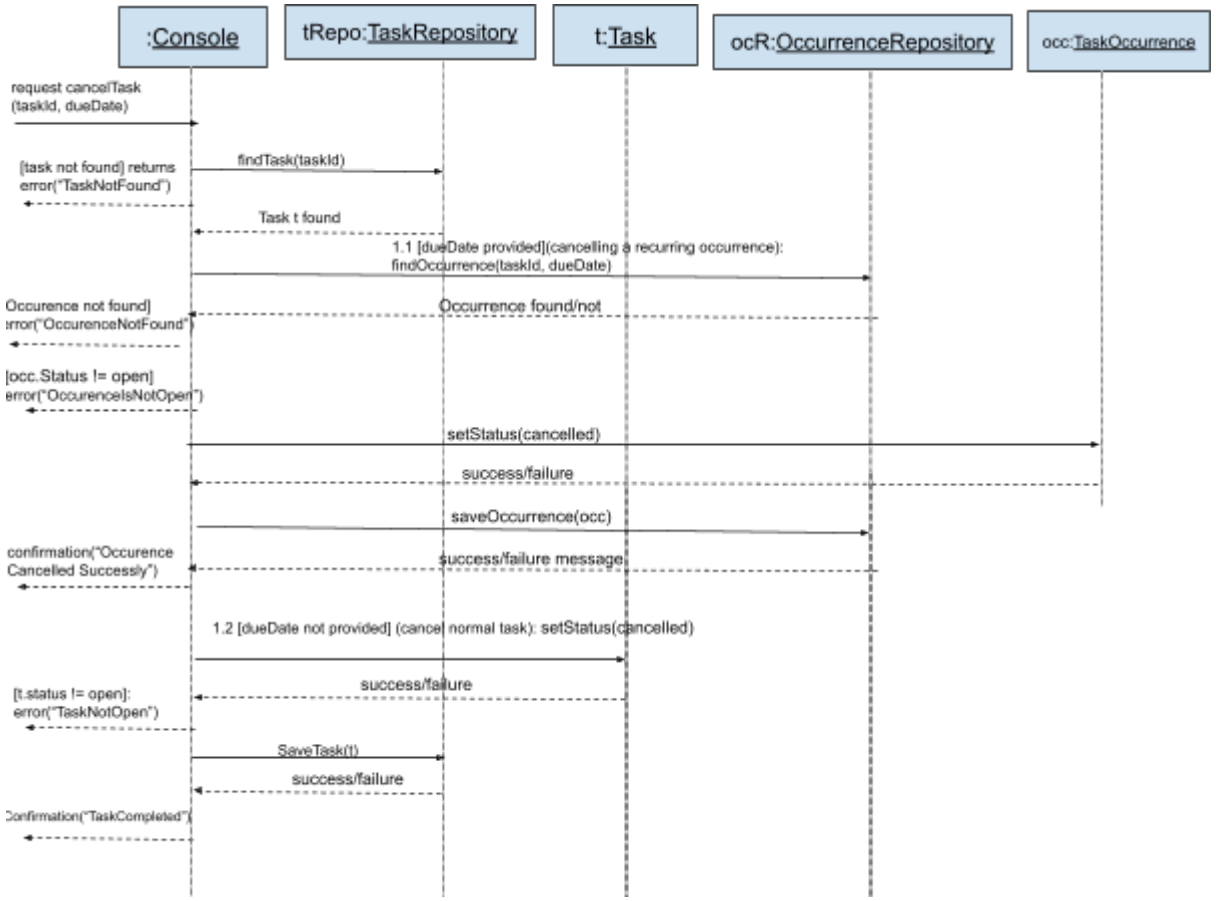
**3. Completing a Task using: completeTask(taskId, dueDate)**

**-If dueDate is not provided → complete the whole task (non-recurring)**

**-If dueDate is provided → complete that occurrence (recurring)**

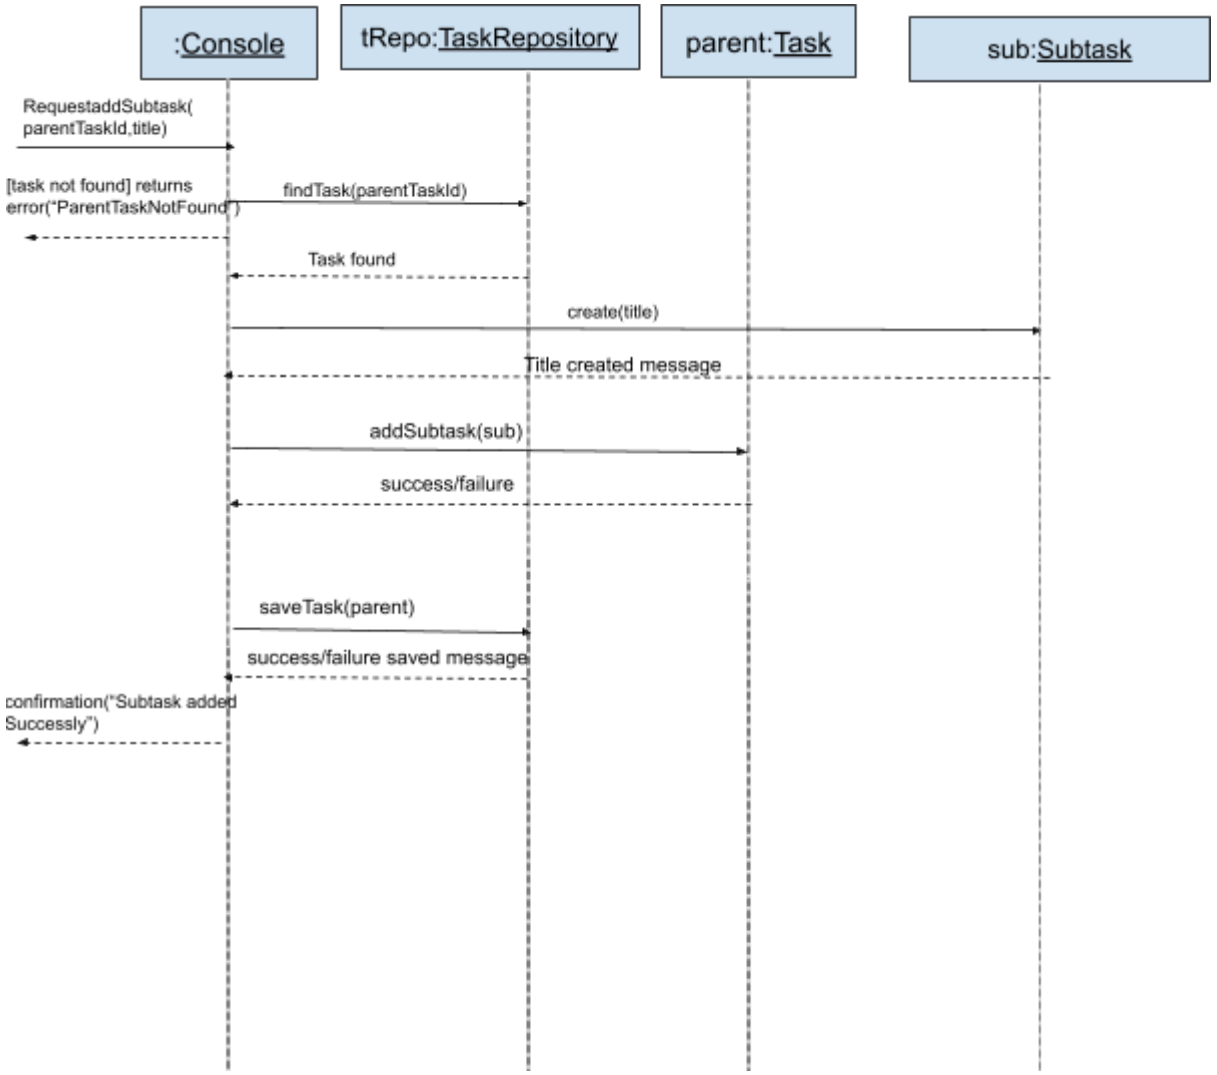


## 4. Cancelling a task/occurence using: cancelTask(taskId, dueDate)

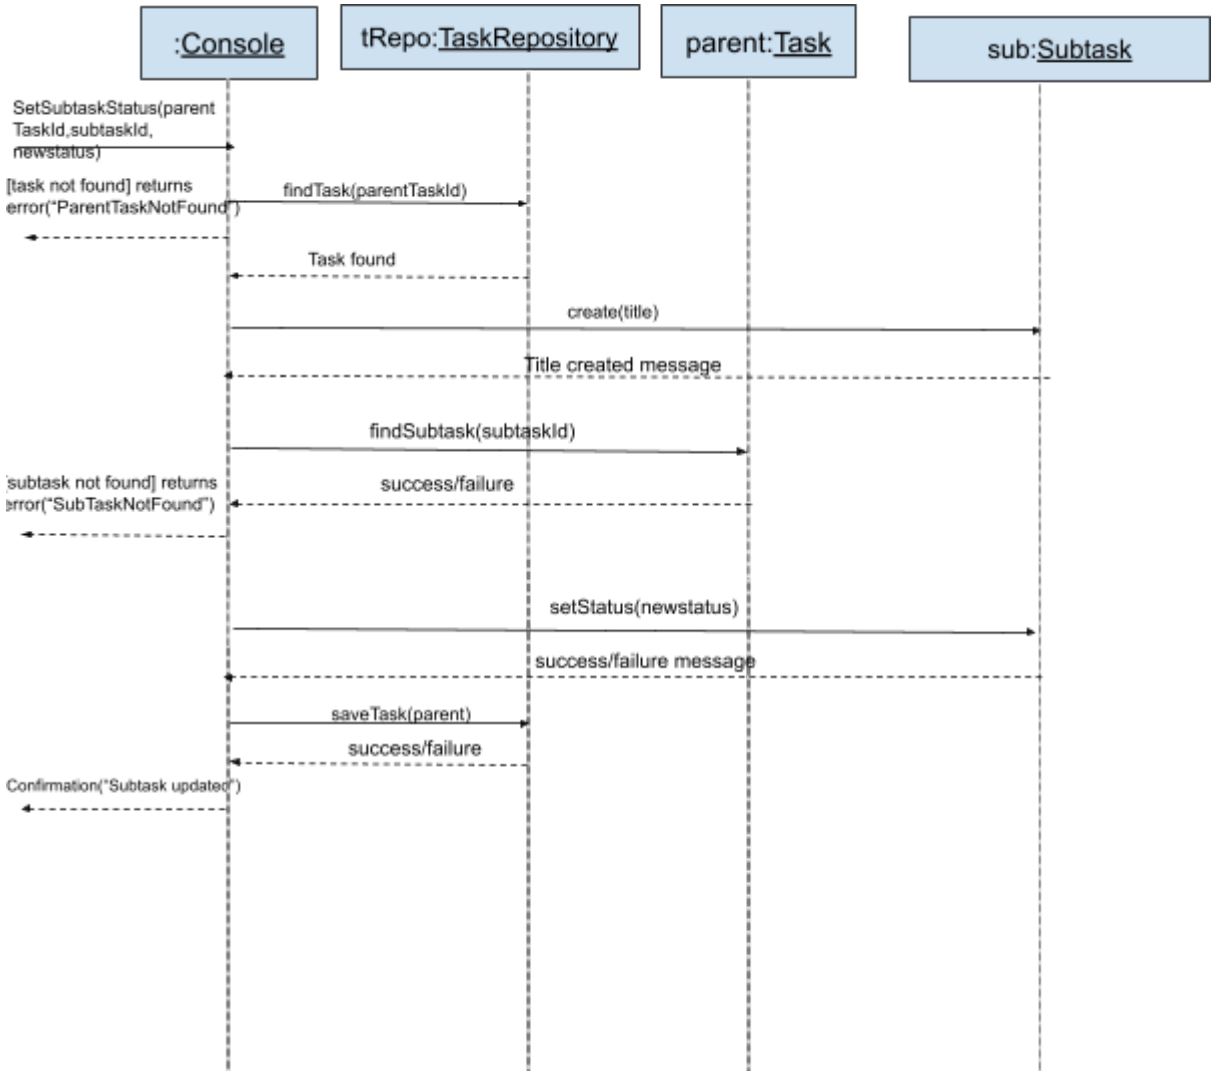


## 5. Managing subtasks using:

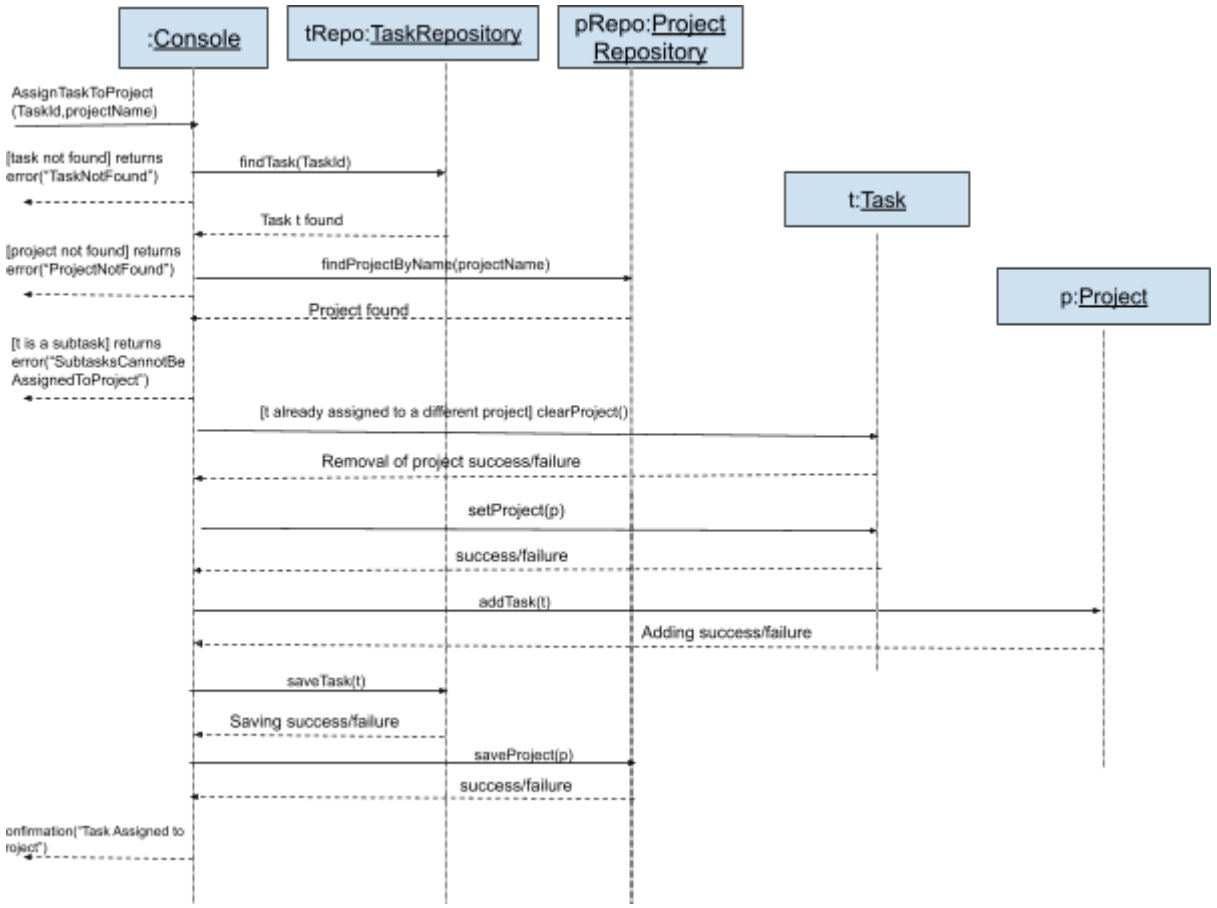
### addSubtask(parentTaskId, title)



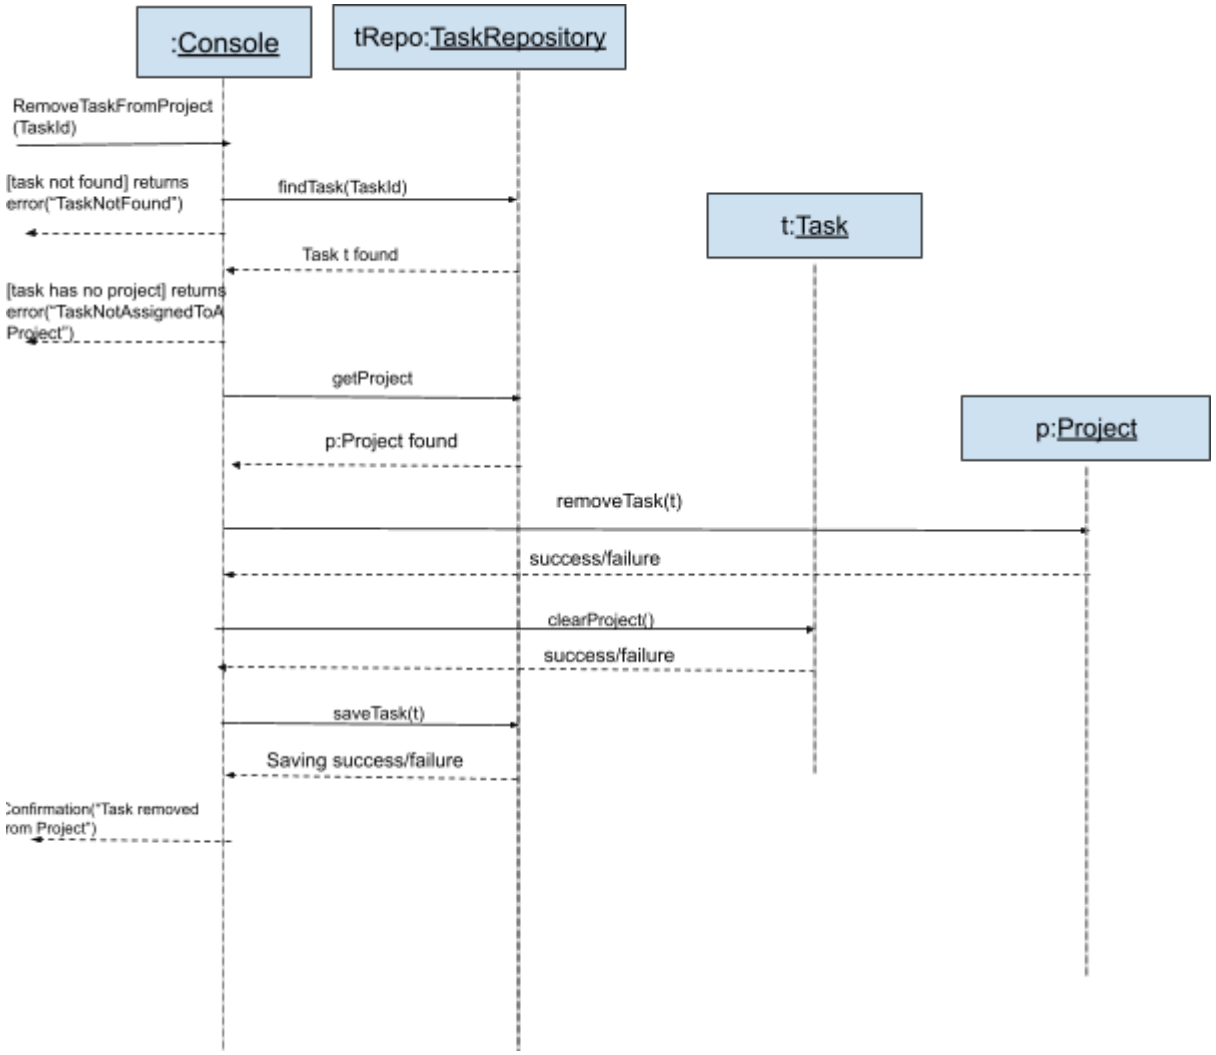
**setSubtaskStatus(parentTaskId, subtaskId, newStatus)**



## 6. Assigning tasks to project using: assignTaskToProject(taskId, projectName)

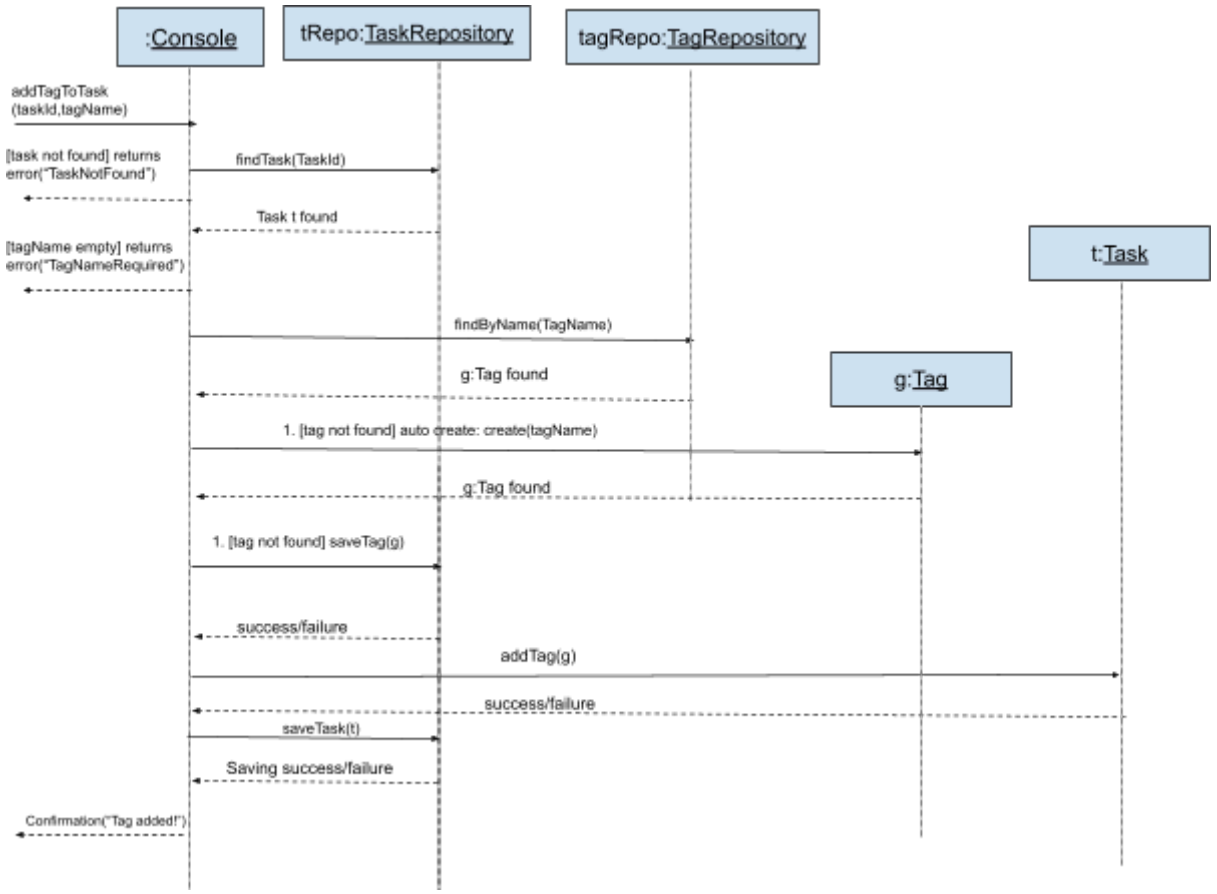


**removeTaskFromProject(taskId)**

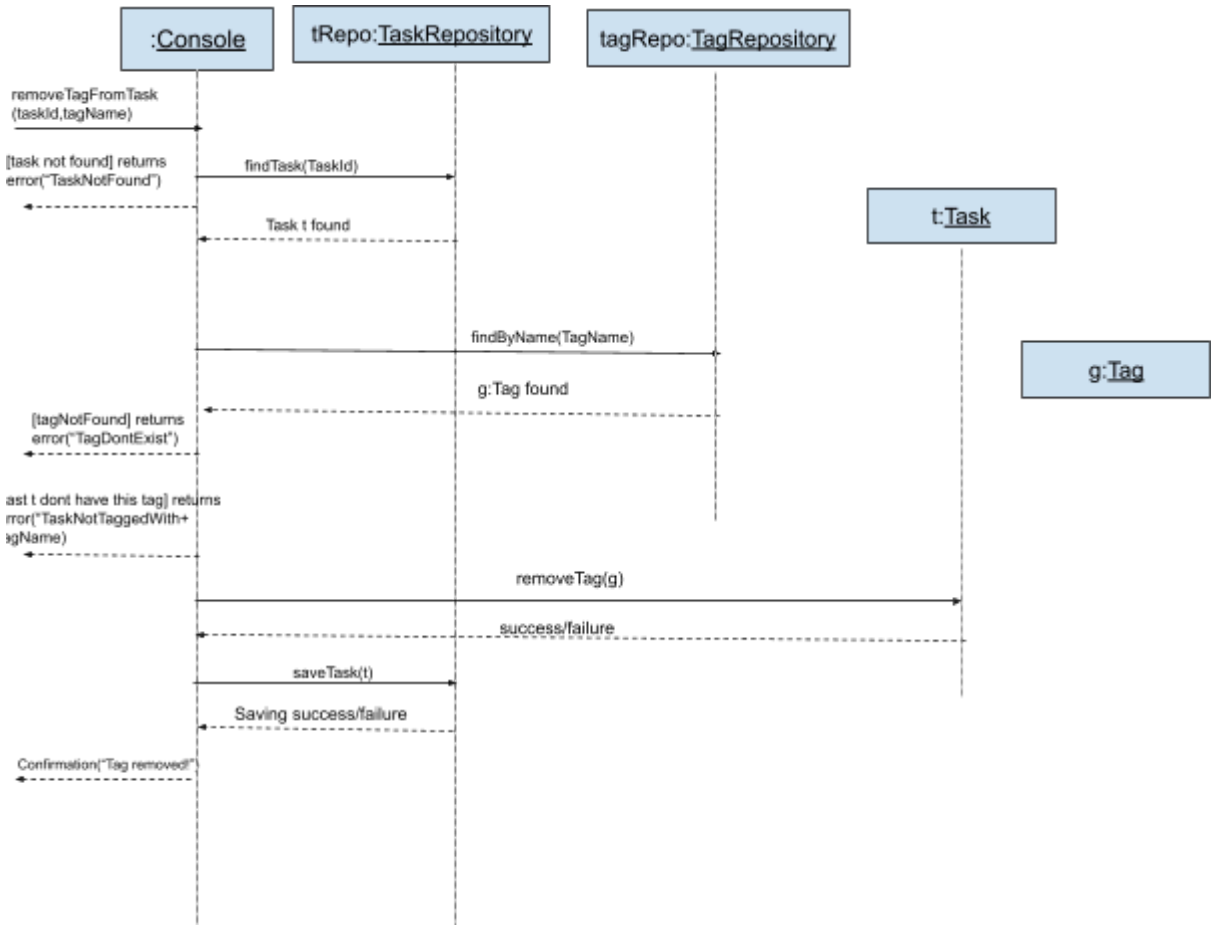


## 7. Manage tags on tasks:

### Add tags to task

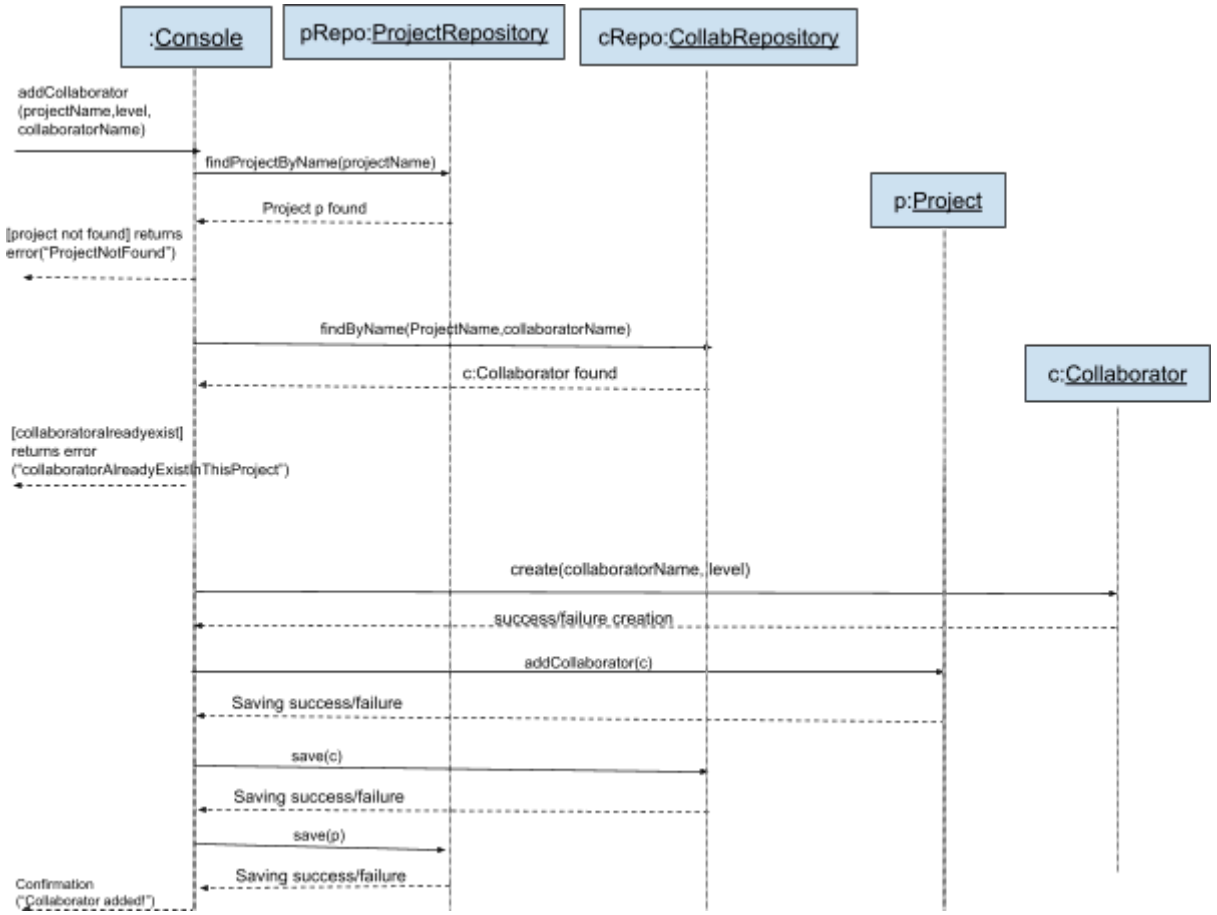


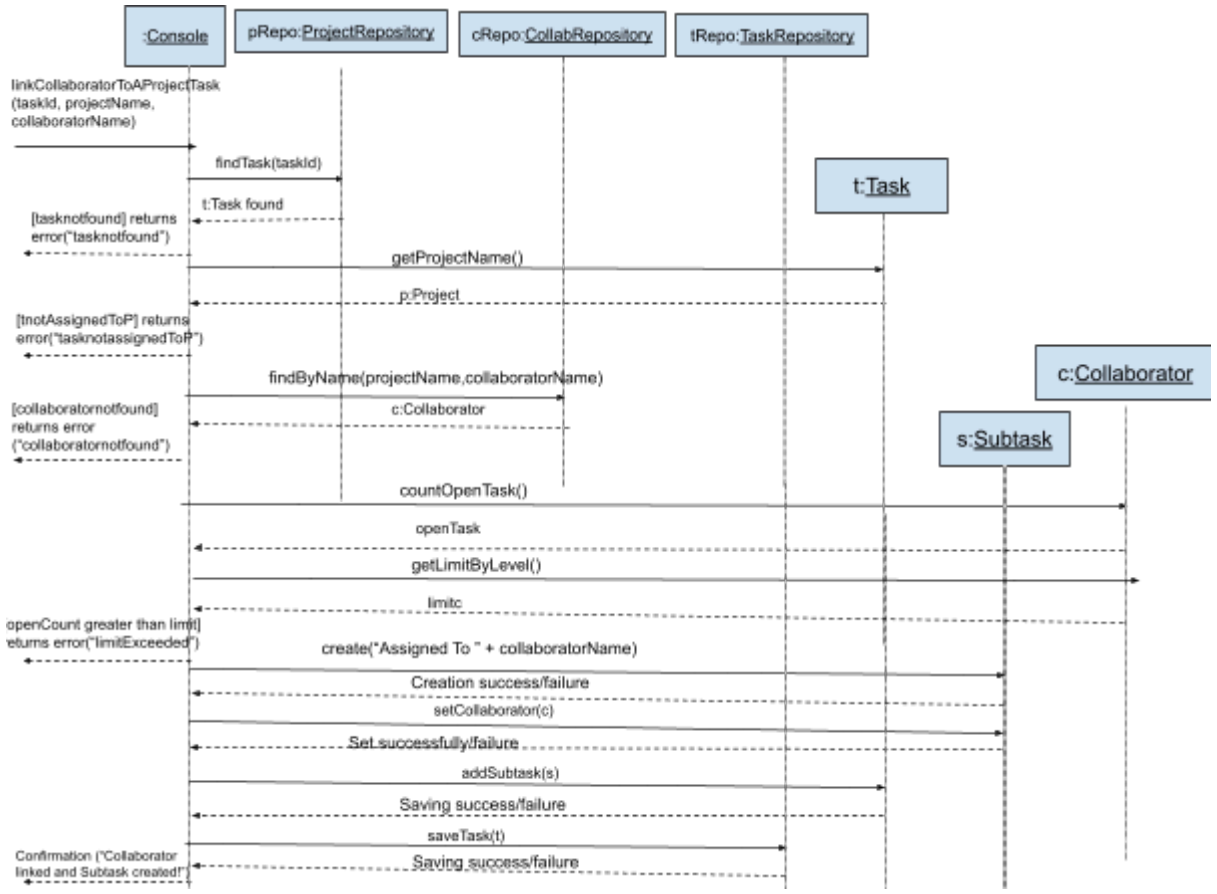
## Remove tags from tasks



## 8. Link collaborator to  project task/manage collaborators and limits:

### Add Colllabotrator to projects





## Link Collaborator to a Project Task
